Congratulations! You’ve just purchased a new Marey tankless water heater and will soon begin to enjoy the benefits of “going tankless”.

Take the time to thoroughly read and understand this safety and installation manual in its entirety before you attempt to install your new ECO 085 tankless water heater, as it contains important safety tips and instructions.

Please carefully read all instructions and warnings. Should you have any questions, please visit www.marey.com for installation videos and FAQ.

Please keep this manual for future reference and technical information.
WARNING

This is not a do-it-yourself project. Failure to have this appliance installed by a licensed plumber or electrician will void all warranties.

Under no circumstances should you attempt to install, repair or disassemble the MAREY tankless electric water heater without first shutting off all power to the unit directly at the circuit breaker box.

Installation of this product is restricted to indoor locations and should only be installed by licensed plumbing or electrical contractors.

IMPORTANT SAFETY INSTRUCTIONS

1. The installation must be in compliance with the National Electrical Code and your local electrical and plumbing codes.

2. This appliance must be GROUNDED.

3. All wiring and installation must be supervised by a qualified electrician.

4. CAUTION: This product has more than one power-supply connection point. Disconnect all power supplies before servicing.

5. This appliance is not intended for use by persons (including children) with reduced physical sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.

6. This appliance MUST be permanently connected to the fixed circuit breaker and it must be installed vertically. DO NOT install this appliance near a pile of tinder or strong magnetic field.

7. This appliance MUST NOT be switched on if you think it may be frozen, as this could result in serious damage to the unit. Wait until you are sure that it has completely thawed out before you switch it on.

8. Please feel the outlet hot water temperature by hand to make sure it is suitable for showering before taking shower to avoid getting scalded.

9. Before connecting pipes to the water heater hoses, it is extremely important to FLUSH the pipes to wash away all plumbing paste or residue in the pipes.

10. The heating chamber is treated with composite nano insulation material; it is natural if there might be a bit of smell or green blue smoke when the unit is used for the first time.
11. If there is damage to the wiring, you must contact a qualified electrician to replace it.

12. CAUTION: FOR HOUSEHOLD AND INDOOR USE ONLY

13. CAUTION: Risk of electric shock, CONNECT ONLY TO A CIRCUIT THAT IS PROTECTED BY A GROUND_FAULT CIRCUIT INTERRUPTER (GFCI).

14. Save this instruction booklet.

PRODUCT FEATURES

The MAREY tankless electric water heaters are built with patent technology with multi-safety devices.

Also, the unit has the following features:

2. Micro-computer control, adopting patent heating technology. Water is completely separated from electricity by multi-layers of composite nano insulation material.

3. Over temperature protection: when the outlet water temp. reaches over 167°F / 75°C, the electricity will be cut off to avoid getting scalded and the screen displays E1. The appliance will start to work automatically after a while dropping temperature to the setting temperature.

4. Malfunction of sensor: when there is malfunction with the temperature sensor, the heater stops working and displays E3.

5. Conversion between Fahrenheit - Celsius degrees.

These units use SMART technology, which means that the units read the incoming water temperature and the flow rate of the fixture being used, and applies only the power necessary to heat the water to your desired set point. This allows the unit to be very efficient and not waste power by only heating the water that is being used.

**Note:** suitable recognized strain relief means shall be provided when the product is installed.

**REMARK:** R: HEATING SYSTEM  T: TRIAC
The installation must be in compliance with the National Electrical Code, your local electrical and plumbing codes.

1. Make sure the appliance is intact, and the fittings are secure.

2. Please make sure the main power supply, water pressure, grounding condition, electrical breaker and wire reach the standard of installation requirement.

3. The appliance must be connected to a properly grounded dedicated circuit of proper voltage rating. Ground must be brought to the “grounding bar” at the circuit breaker panel.

4. This appliance MUST be permanently connected to the fixed circuit breaker. If you don’t use the heater, please switch off the circuit breaker.

5. DO NOT install this appliance near tinder or a strong magnetic field. The unit must only be mounted in a VERTICAL position near the water fittings. Please electrify try the machine after getting through waterway.
Fixed installation on the wall
Locate an appropriate place on a section or wall as above mentioned.

**Fig. 02:** Front and back of the appliance

**Fig. 02:** Mark two mounting holes on the wall according to the following picture, then drill two holes of 6.00mm diameter. Put expansion bolts in the holes, screw self-tapping-screw into expansion bolts, then fix the water heater on the installation screws.
Fig. 03: Connect the water pipe to the water inlet and water outlet connections, please remember to install the rubber seal ring.

**Water connections**

1. All water pipe must comply with national and applicable state and local water pipe codes.

2. The unit should be connected directly to the main water supply. Flush pipe with water to remove any debris or loose particles before connecting to the unit.

3. It is required that use 1/2"NPT water connections to fit the models of ECO085.

4. Please remember to install rubber seal rings at the connections. When all water connections are completed, check for leaks and take corrective action before proceeding.

**Electrical connections**

1. All electrical work must comply with national and applicable state and local electrical codes.

2. All units must be connected to a properly grounded dedicated circuit of proper voltage rating.

3. The ECO085 must be protected by a double pole breaker.
4. Please make sure the wiring and the terminal blocks touch completely and are secure. Also, tighten the screws completely on the terminal block to make sure the full current can go through.

5. Before beginning any work on the electric installation, be sure that main breaker panel switch is OFF to avoid any danger of electric shock, all mounting and plumbing must be completed before proceeding with electrical hook-up.

OPERATING INSTRUCTIONS

1. Open water faucet for a few minutes until water flow is continuous and all air is purged from water pipes.

2. Turn on the circuit breaker to bring electrical power to the unit.

3. The range of options for the temperature setting is 30-55°C / 86-131°F.

4. When the unit is ON, but not working, then turn the unit on and off 3-4 times to convert the temperature display between Fahrenheit and Celsius.

5. Centigrade display: when the setting temperature is 45°C, outlet hot water temperature will be 45°C; Fahrenheit display: when the setting temperature is 113°F, outlet hot water temperature will be 113°F. When you set the setting temperature, LED display screen will twinkle 3 seconds; the temperature switched automatically to real-time temperature.

6. When the unit is ON, the LED display screen will display the actual temperature, if it does not start working for 30 seconds, the screen will switch to the screen saver mode, the LED display screen will be off. When you touch the knob switch, the LED display screen will light up again and display the actual temperature.

7. There is an overheat protection function for the appliance, if the outlet temperature reaches 72°C / 167°F the LED display screen will display E1, the appliance will decrease the power level automatically. After the hot water temp. drops to 60°C / 140°F to work again. If this happens repeatedly then you should reduce the setting temperature.

8. The dry protection temperature is 90°C / 194°F, water heater is with manual reset unipolar protector.

9. There is an automatic memory function to avoid repetitive adjustments. When you turn on the appliance, the default set temp. will be the same as last time used.

## NORMAL MAINTENANCE

**Note:** Do not attempt to repair this water heater yourself. Call a service person for assistance. Always shut off the power supply before performing these actions.

To ensure consistent water flow, is recommended the following maintenance.

1. Periodically remove scale and dirt that may build up at the aerator of the faucet or in the shower head.

2. There is a built-in filter screen at the inlet connection which should be cleaned from time to time. Please turn off the water flow before doing this.
Please feel free to contact us if you have any questions about our products, warranty service, or if you need assistance installing a unit. We also strive for continuous improvement, so we welcome your comments, feedback and suggestions.
